

CYBER SECURITY INTERNSHIP

Task 2: Phishing Email Analysis Report

Prepared by: Shreshta S S

Date: June 30, 2026

Table of Contents

1. Objective
2. Sample Email
3. Analysis
4. Header Analysis
5. Interview Questions
6. Conclusion

1. Objective

Analyze a phishing email sample and identify phishing indicators, social engineering techniques, and methods to verify authenticity.

2. Sample Email

From: support@paypa1.com
Subject: Your Account Has Been Suspended
Dear Customer, verify immediately at <http://paypal-verification-login.com>

3. Phishing Indicators

Indicator	Observation
Spoofed Sender	paypa1.com uses 1 instead of l
Generic Greeting	Dear Customer
Urgency	24-hour deadline
Suspicious Link	Fake PayPal domain
HTTP	Not HTTPS
Social Engineering	Fear and urgency
Grammar	Minor wording issues

4. Header Analysis

Expected observations:

- SPF: Fail
- DKIM: Missing/Fail
- DMARC: Fail
- Sender IP inconsistent with official domain.

Illustrative Header Flow

5. Interview Questions

What is phishing?

A cyberattack that tricks users into revealing sensitive information.

How identify phishing?

Check sender, links, urgency, grammar, attachments.

Email spoofing?

Forged sender address.

Why dangerous?

Can steal credentials and install malware.

Verify sender?

Check domain, headers, official contact.

Header tools?

MXToolbox, Google Admin Toolbox.

Action?

Report, avoid links, delete.

Social engineering?

Manipulates trust, fear, urgency.

6. Conclusion

The analyzed email exhibits multiple phishing characteristics including spoofed sender information, urgent language, suspicious links, and impersonation. Users should verify sender authenticity and avoid interacting with suspicious emails.
